200+ day Timeline: Fixing Amazon's Metadata Mess

Date	Actions Taken
28.09.2025	Discovered Tom Hiddleston credited as "Hiddlestone" on Loki (Collector's Edition Steelbook, Seasons 1 & 2) and The Night Manager – Staffel 1. Contacted @AmazonHelp about this — they only fixed the typo on Season 1 of Loki.
18.10.2025	Discovered nine more "Hiddlestone" credits on Amazon.de.
13.11.2025	@AmazonHelp opened a ticket for me in regard to the wrongly credited articles I had found.
17.11.2025	Contacted Mr. Hiddleston's agent via the Hamilton Hodel website (and via Instagram DM the following day), to inform them about multiple incorrect listings of their client's name on Amazon.de. As I am a private individual with no industry ties, it's possible my message was overlooked or not prioritised
18.11.2025	Received the following message on X from @AmazonHelp in regards to Mr. Hiddleston being falsely credited as "Hiddlestone": @TanjaWho What a difference a single extra "e" can make. Apologies for the typo in the name "Tom Hiddleston." We've already forwarded this. Generally, you can always use the "Report an issue with this product" function on the respective product page. Thank you for your efforts. -Doreen"
20.11.2025	Discovered Samuel L. Jackson being credited as "L. Jackson" and "Samuel Jackson", and Robert Downey Jr. as "Robert Jr. Downey". Also found that the title of the movie The Protégé was mangled into "The ProtÄLgÄL".
22.11.2025	Discovered that Tom Hiddleston was credited as "Hiddlestone" across nearly every listing on Thalia.de. I contacted them and received a reply within hours, promising that they would look into it and report back once the issue was resolved
24.11.2025	Thalia confirmed that the "Hiddlestone" error originated from their distributor and informed me that they had fixed their entire catalogue. On the same day, I discovered that Chris Evans was credited as "Robert Evans", Robert Downey Jr. was listed as a main cast member in "Der Unglaubliche Hulk" despite only having a cameo, and Laurence Fishburne was oddly credited as part of the "Thunderbolts*" cast. This last issue was also present on Thalia.de. Upon contacting them again, Thalia informed me that their distributor was responsible and provided contact details for LEONINE
27.11.2025	Stumbled upon a DVD box set of the 1960s UK spy series "The Avengers", where Amazon.de incorrectly credited Jeremy Renner and Scarlett Johansson as main actors and Joss Whedon as the director. Shared a screenshot of this listing on X , tagging @StudiocanalUK .
28.11.2025	Contacted LEONINE about incorrect metadata across several listings, referencing Thalia's confirmation that they are the metadata source.
02.12.2025	Contacted CAA via email, informing them that Scarlett Johansson was falsely credited in the 1960s TV series The Avengers.
03.12.2025	LEONINE replied , claiming the issue originated on Amazon.de's side. I replied, pointing out that the same errors appear on multiple platforms they distribute to and urged them to check my detailed spreadsheet.
04.12.2025	Contacted Disney Germany regarding the systemic miscrediting of Marvel actors (e.g., Hiddleston, Jackson, Johansson, Renner and more) and the misattribution involving the 1960s "The Avengers" series. Included a spreadsheet and screenshots for review. They replied later the same day, confirming that the issue has been forwarded to the responsible department.
7.12.2025	Contacted @EquityUK and @sagafta on X, informing them of the persistent miscrediting of actors on AmazonDE affecting multiple names.
13.12.2025	Filed a complaint with the German Verbraucherzentrale against AmazonDE for failing to correct the reported errors and for neglecting to follow up on the support ticket they had opened regarding the issue.

200+ day Timeline: Fixing Amazon's Metadata Mess

Date	Actions Taken
24.12.2025	Presented AmazonDE their well earned Christmas present .
28.12.2025	Discovered yet another misspelling of Tom Hiddleston's name on medimops. I sent an Email to the retailer, asking them to correct this error. They replied on the same day. I also found two more " Hiddlestone " listing on BMV-medien.de and informed them about those errors via their online contact form.
29.12.2025	I shared my " Invoice " with AmazonDE on X , bluesky , mastodon and Threads .
30.12.2025	Google's AI has now indexed AmazonDE's metadata errors, the misspellings and it has also knowledge about my " quest " to get those errors corrected.
5.1.2026	BMV-Medien fixed both their wrongly credited articles where Tom was listed as "Hiddlestone" again. I also had an idea to see what results AmazonDE would show, if I click on the wrongly credited Name " Robert Evans ", which should be Chris Evans , and the results were rather concerning. This is when nobody checks the metadata! I reached out to CAA again, since they are representing Evans, Johansson, Jackson and Renner, informing them of the inappropriate search results, that might reflect negative on Chris Evans. That Email has been blocked by their server. I tried the same text but without any attachments, but the email got instantly blocked again.
6.1.2026	Found another " Hiddlestone " article on Hugendubel.de . Luckily, this was the only one I could find in their catalogue. A request was sent to them, asking this error to be corrected, which they did within a few hours.
8.1.2026	Sent an Email to AmazonDE , informing them about the decade old errors, how those spread to other platforms and that those errors have been ignored for over 100 days now, without any corrections being made, I received a reply from them the same day.
10.1.2026	After publicly documenting today's findings on X, @AmazonHelp responded and connected me with a member of the UK customer support team (see attached chat correspondence). During further investigation, I also discovered a more serious issue: when searching for "Tom Hiddleston" within the DVD & Blu-ray category on Amazon.co.uk, a significant portion of his filmography does not appear in the search results. Notably missing titles include: War Horse, Kong: Skull Island (only a Kong box set appears), Only Lovers Left Alive, The Hollow Crown (only one version visible), Loki and likely additional titles, pending comparison against his complete filmography. This strongly suggests a broken or fragmented contributor indexing system, where titles are inconsistently linked (or not linked at all) to the correct contributor identity. As a result, customers are unable to reliably discover all works associated with an actor, depending on format, ASIN, or region. This issue appears to go beyond isolated listing errors and points to a systemic contributor-ID and metadata integrity problem affecting search, discoverability, and downstream catalog accuracy.
12.1.2026	I received an Email from Executive Customer Relations . Attempted to send requested documentation via email, but Amazon's firewall blocked all messages containing links or attachments. A plain-text version was sent instead, directing them to the publicly available spreadsheet. Message confirmed delivered. Medimops.de replied , saying that they use external metadata and therefor rely on their source to correct any errors.
13.1.2026	Received an Email from Amazon UK Executive Customer Relations in regards to my previous inquiry. I have sent them a reply , which included all the ASIN numbers of the affected articles and on different storefronts. I also noticed, that the majority of those articles, had Germany as land of origin, which suggests to me, that the root cause for this metadata errors, spreads from this platform into other stores worldwide.

200+ day Timeline: Fixing Amazon's Metadata Mess

Date	Actions Taken
16.1.2026	Tried to reach Hamilton Hodell, CAA, EquityUK and SAG-AFTRA again, in the hope that at least one of them would look into the miscrediting of their clients and union members.
19.1.2026	Shared my " job application " as Brand Guardian on Blusky , mastodon , Threads and X .
20.1.2026	Called CAA in Munich in order to inform them about my latest findings about Scarlett Johansson being still listed as part of the producers of "Thunderbolts*", as well as Chris Evans being credited as Robert Evans, Scarlett Johansson and Jeremy Renner being part of the main cast in the 60's "The Avengers" tv series and Samuel L. Jackson being credited as Samuel Jackson or L. Jackson. I left my contact number on their answering machine, hoping that some human being will actually listen to this.
23.1.2026	Contacted EquityUK and SAG-AFTRA via email today, hoping that they might help me with getting the names of those actors finally corrected. SAG-AFTRA replied later that day.
24.1.2026	Contacted MARVEL US, informing them of the systemic metadata errors of their products.
26.1.2026	I've contacted Amazon Customer Service again, asking them for an ETA on fixing all those errors in their database.
5.2.2026	Discovered FOUR more Hiddlestone items on AmazonDE. And after 130 days, they still haven't fixed anything and are no longer replying to any emails either.
6.3.2026	Till this day no answers from EquityUK, Marvel US nor Amazon in regards of this issue.
7.3.2026	After 160 days of trying to convince Amazon that Tom Hiddleston is not "Hiddlestone", I conducted an independent audit of their catalog integrity. The results are... enlightening.
27.3.2026	I contacted StudiocanalUK via their website, informing them about the "Avengers" cast mixup with Scarlett Johansson, Jeremy Renner and Joss Whedon.
29.3.2026	Emailed Amazon's CEO A. Jassy, informing him about the systemic metadata failure. I also sent an Email to Mr. Hiddleston agency Hamilton Hodell again. And I had a longer conversation with AmazonHelp on X , which was quite insightful.
16.4.2026	What started as a single typo turned into the discovery of a system that cannot recognise systemic errors. Errors don't just exist...they multiply. Across international platforms. Across third-party retailers. I've informed every stakeholder who should care: retailers, distributors, studios, unions, agencies. No one owns the problem. This is my Day 200 report. From here on, all I can do is document how long the system remains broken.
5.6.2026	I used GPT-5 to explore some questions in regards to metadata, broken identities and how errors can persist for over a decade and what that implicates. I find the answers to my questions quite interesting. The whole document can be found in this dropbox link.

200+ day Timeline: Fixing Amazon's Metadata Mess

Date	Actions Taken
22.7.2026	Did another deep dive into AmazonDE's database and found yet another movie , which had a completely mixed up cast list.
